PROFILE

Motivated IT student with strong technical skills and personal projects, seeks an entry-level software engineering position who is proactive, collaborative, and with excellent communication and problem-solving abilities.

EXPERIENCES

Shop Beast (Full-Stack Application)

- It is a web app for a shop called Shop Beast to show the products to sell. Anyone can go into the site and look at the products, Only the shop admin can add new products (Authorization) to the site. Users need to create an account if they want to buy an item.
- I used Angular for the **Frontend**, Spring(spring boot and spring Security) for the **Backend**, and MySql for Database. The authorization part is done with Spring security and uses JWT token support for login and other functionalities.
- The site Supports pagination, dynamic cart adding and removing with total value and total quantity, and many more. I will continuously build this project and hope to add some new features.

Personal Expenses Monitor (Flutter)

Tour Me (Angular/NodeJS)

Voice Search (Python)

Memory Game (React)

EDUCATION

University of Moratuwa

2022 - 2026 | Bachelor in Information Technology & Management

Institute of Software Engineering

2021 - 2022 | Comprehensive Master Java Developer

Richmond College Galle
